

## How to use RegCure

Identifies problems with your registry & fixes them.

Click **Start Scan** and wait for the process to run through

# DESC Computers

This is what the process looks like and can take a small while to complete

# DESC Computers

Once the process is complete it will show you the errors. **DON'T** worry with the amount. This is normal

The screenshot shows the RegCure software interface. The title bar reads "RegCure" with the tagline "Scan, Repair and Optimize your PC!". The interface is divided into a left sidebar with buttons for "Scan", "Settings", "Backup", "Manage Startup", and "Results". The main area is titled "Scan" and shows "System scan and detection. Step 2 of 3". A yellow warning icon indicates "214 Problem(s) Found". A table lists the following scan results:

✓ 0	COM/ActiveX Entries	✓ 0	Windows Startup Items
✓ 0	Uninstall Entries	✗ 22	File/Path References
✓ 0	Font Entries	✓ 0	Program Shortcuts
✓ 0	Shared DLLs	✗ 192	Empty Registry Keys
✓ 0	Application Paths	✓ 0	File Associations
✓ 0	Help Files Information		

Below the table, the "Current Scan" section states: "System scan is complete. Click Next >> to proceed." At the bottom, there are "<< Back" and "Next >>" buttons.
